HUNTIA is a yearbook devoted to studies of the literature on systematic botany and horticulture, botanical voyages and explorations, early agriculture, medical botany, and the related subjects of botanical biography, iconography, and bibliography.

While HUNTIA serves primarily as a record of investigations at The Hunt Botanical Library, its pages are open also to papers from scholars of other institutions.

Short-title list of selected acquisitions, 1960-63

Carolyn J. Stanley

THE HUNT BOTANICAL LIBRARY is maintaining an active acquisition program. Whereas the initial collection stressed pre-Linnaean works, especially the herbals and related works on materia medica, the emphasis since 1962 has been and will continue to be on material published from 1730-1840—the period covered by *Bibliographia Huntiana* (cf. p. 17). Our holdings for the period extending from the time of the incunabula to 1800 have previously been reported in the first two volumes of *The catalogue of botanical books in the library of Rachel McMasters Miller Hunt* (1958, 1961). Important items of this period acquired since the publication of the catalogue are included below in the short-title list of selected acquisitions, as well as the more outstanding works of the half-century from 1800 to 1850. We continue to add to our holdings significant works published after 1850, especially those important as research tools for the botanical and bibliographical study of this literature.

The list below does not report the acquisition of titles of journals, encyclopedias, and other material outside the subjects of botany and systematic horticulture, such as voyages, plant culture and history, biography, garden and landscape design, and economic botany. Other holdings of interest, but not listed here, are significant suites of original doctoral dissertations by the students of such botanists as Linnaeus, Kalm, and Thunberg, and the often small but highly important monographic studies devoted to individual plant genera or groups.

The titles listed have been acquired during the three years that this library has operated as a unit of Carnegie Institute of Technology. Subsequent volumes of *Huntia* will continue to report each year's significant acquisitions.

In the list below, places of publication are given as they appear on the title-page. A date within brackets indicates that it appears on the title-page as a roman numeral; a bracketed date preceded by n.d. shows that there is no date on the title-page, but that the date has been added from other sources. Spellings of cities of imprint are given as on title-page.
